

At Acera, teachers are able (and free to):

Leverage evidence-based pedagogy of integrated, cross-disciplinary, inquiry-driven, project based learning, and constructivist ways to come to understand ideas

while also including student voice and customization to fit students' learning profiles and interests and academic readiness

while also building students' classic academic skills for life (writing, speaking and presenting, analytical thought, organization and planning...)
... the layers of learning that happen

While **having authentic assessments**, which often come through observations of real experiences and project presentations (rather than timed tests which more readily focus on knowledge acquisition rather than deep thinking and understanding)

while concurrently developing students' core capacities and habits of mind (problem solving, creative and divergent thinking, emotional intelligence and frustration tolerance, systems thinking, perspective taking, ethical decision making, teamwork and collaboration skills, etc.)
